

USER GUIDE: Adding Smart Door Locks To POE/Wi-Fi Touchpad

Certain Smart Door Locks from 3rd party manufacturers can be linked locally with the POE/Wi-Fi touchpad. They need to be TTPack compatible to be linked.

For other Touchpad related guides look under www.eyezon.com/guides.

Note: Make sure the UNO alarm panel is at Firmware version 168 or above and perform a zone update in the UNO programming sections of the portal to ensure that the app has access to the latest panel information. For SOLO make sure the version is at least 143.

Locks must first be linked via the TTPack app or the manufactures own app. You can then login with the same email and password used for the respective setup method. Once linked you can view the status of all locks, as well as locking and unlocking.
